Continuation of 11. does NOT place the application in condition for allowance because: The Examiner maintains that traversing a hierarchical tree structure to provide a current location is well known in the art. Applicant argues the combinations of Wang (which teaches the tree traversal) with Fitch and Merriam. However, the Examiner contends that all references relate to location finding and are thus combinable. Further, Wang is soley relied upon to teach a specific method of location finding through tree traversal. Further, it is known in the art to provide means to have the most efficient and accurate location finding means by traversing nodes (see Decker 6,462,706 made of record in the first office action, col. 2: lines 51-57, col. 3: lines -11).
